Topic/Lesson:	Grammar/Editing - Atlantic Sturgeon Article
Objectives:	Students will be able to:
	Identify grammatical and mechanical mistakes.
	Demonstrate their editing knowledge by accurately correcting mistakes.
Materials:	<ul> <li>EagleTribune.com or hard copy of article</li> <li>Pencils, erasers</li> <li>Red pens/Highlighters for marking mistakes in article if desired</li> <li>Dictionaries</li> <li>White Composition paper</li> <li>Editing Guideline Paper</li> <li>Punctuation Marks Paper – view at link below <a href="http://www.boiseschools.org/curriculum/la_supplement/editing_sy_mbols.pdf">http://www.boiseschools.org/curriculum/la_supplement/editing_sy_mbols.pdf</a></li> </ul>
Vocabulary:	<ul> <li>Edit</li> <li>Grammatical mistakes</li> <li>Mechanical mistakes</li> <li>Atlantic sturgeon</li> </ul>
Procedures:	<ol> <li>Ask desk partners/groups to brainstorm some common grammar and mechanical rules they follow when writing.</li> <li>Discuss these ideas and create a visual list somewhere in the room for students to access during the lesson.</li> <li>Write the following sentence on the board "i think the red Sox will. win the wurld series this very year?"</li> </ol>
	4) Have volunteers identify the mistakes in the above sentence and offer ways to fix the sentence.
	5) Discuss that students will receive an article from the newspaper. This article has been tampered with, and now there are grammatical and mechanical mistakes that they are responsible for identifying and correcting.
	6) Students will read the article and highlight any mistakes they find.
	7) Next students will work on editing, and fixing the mistakes.
	8) Students will rewrite the edited article on white composition paper.
	9) Partners will compare their edited version.
	10) Class discussion on the mistakes each student highlighted and

	which alternatives they used to fix each mistake.  11) If time allows, give the Original Published Article to the students. If there is time, you can ask them to try to find any possible errors that the author might have missed.
Accommodations/ Modifications:	<ul> <li>Preferential seating</li> <li>Peer partnering/cooperative learning</li> <li>Multiple step instructions/guidelines/strategy</li> <li>Teacher check-ins</li> <li>Refocusing</li> <li>Checklists</li> <li>Step-by-step written instructions</li> <li>Scribing when necessary/alphasmarts</li> </ul>

'It was just the scariest, prehistoric-looking fish' Second catch of rare Atlantic sturgeon in a year

By Stephen Tait

NEWBURYPORT — Its a rare catch for sure, but for the second straight summer a fishermen on the merrimack River landed a primitive Atlantic sturgin.

the fish, which grows to lengths of 15 fet, live for long as six decades and are some of the most primtive animals in the waters of north america. They are on the state's endangered list and are not a usual catch in locale waters known for populations of stripers and Bluefish.

But Joe giambarresi found out Tusday. that rare does not mean impossible.

Giambarresi, of Amesbury, said he out fishing at the mouth of the river — which was rough with larrge, rolling waves — and was seeing some success? Giambarresi said he and friend Vance DeVincent of dracut had caught four or five stripers and an bluefish that breaked the line.

That's when they hook what they thought was a massive striped bass.

We thought it was a 60-pound striper," Giambarresi said.

Giambarresi said when hooked, the sturgeon took off and taked almost all the line with it He said they had to back up their boat to gain ground on the fish. Finaly, he said, they reeled the fish to the boat

"It was just the scaryest, prehistoric-looking fish," he said of the 5- to 6-foot-long fish. "It was the most amazeing thing to see this fish.

Last August, Jeff Hajjar, a Methuen nativ who now lives in Idaho, telled a similar story of catching a 6-footlong sturgeon. Hajjar, like Giambarresi, said when he hook the fish it also quickly swam away from the boat taking loads of line with it.

"He was an big son of a gun," Hajjar said in an interview last years. "We thought we caught some kind of giant shark at first"

kristen Ferry, a fish biologist for the state Division of Marine Fisheries, said last year that catching a sturgeon in the Merimack is not a normal occurrence and echo those feelings about the most recent sturgeon catch.

"I still think it is a rare thing, she said. "It is pretty unusual."

Ferry said the Atlantic sturgeon is a migratory fish and moves up and down the East coast of the united States. She said biologests will find a sturgeon that has originated in southern states and Migrated to the bays and waterways of the Northeast.

The biologist said the catch, which Giambarresi and DeVincent throw back once they realized it was a sturgeon, comes at the same time as reports as recent as yesterday of a dead sturgeon floating in the mouth of the merrimack River. She said several people sented in pictures of the dead fish, but as of yesterday afternoon, it had not been located by officials

But Ferry said the dead fish and Giambarresi's fish are not the same ones. She said the dead one is much smaller and probly a different species — one that live primarily in brackish river water.

ironically, Giambarresi's catch likly wouldn't have happened if it weren't for high Gas prices.

Giambarresi and DeVincent work together at Security Pest Elimination, which DeVincent owns, where they take off occasional afternoons to cast their lines. In years past, they made frequent trips to Halibut Point or Jeffrey's Ledge.

But with a gallen of gas for boaters nearing \$5, DeVincent, who also owns the boat, said he is staying in the river much more often these day.

"The upside was there were alots of fish of all kinds (in the river)," Giambarresi wrote in a e-mail.

The origins of Atlantic sturgeon date back more than 120 milion years, and the animals grow to as big as 15 feet and 800 pounds, according the chesapeake Bay Program, a restoration partnership for that body of water, which is a popular place for sturgeon to live and spawn.

Sturgeon does not have scales but rather five rows of bony plates called scutes. They use their hard snouts to look for food along the bottom of the waterways? They typically eat mollusks and crustaceans.

The first market for sturgeon on the East Coast started in 1628 in Brunswick, maine, according to the Chesapeake Bay Program. Beyond food, the fish's skin was used as leather for clothing and book bindings.

sturgeon are still valuable, especially the roe which used for caviar that can fetch more than \$250 a pound.

The fish usualy spawns in rivers. Juveniles stay in the fresh or brackish water for won to six years before moving out to the ocean. The fish tend to stay close to the sure when they become adults.

The first market for sturgeon on the East Coast started in 1628 in Brunswick, Maine, according to the Chesapeake Bay Program. Beyond food, the fish's skin was used as leather for clothing and book bindings.

Sturgeon are still valuable, especially the roe, which is used for caviar that can fetch more than \$250 a pound.

The fish usually spawns in rivers. Juveniles stay in the fresh or brackish water for one to six years before moving out to the ocean. The fish tend to stay close to the shore when they become adults.

### **Editing Guidelines using COPS (Capitalization, Organization, Punctuation, Spelling)**

Use punctuation mark paper to mark up article or story you are editing.

#### Capitalization

- Every sentence must start with a capital letter.
- I should always be capitalized.
- Always capitalize proper nouns (specific names, titles and places).
- There should be NO capitals in the middle of sentences unless it is for proper nouns.
- Use capital letters to begin dialogue.

#### **Organization**

- Make sure every sentence is a complete thought no fragments or missing words.
- Every sentence must have a subject and a predicate.
- Separate run on sentences with punctuation.

#### **Punctuation**

- Every sentence should end with the correct punctuation. (.,!,?)
- Use "quotation marks" when someone is talking (dialogue).
- Use commas when you list two or more things. (book, pencil, and notebook)
- Make sure all contractions have apostrophes (wouldn't)

#### **Spelling**

- Make sure every word is spelled correctly.
- Look up questionable words in the dictionary.
- Spell out numbers (one, two, three).
- Make sure the correct homophones are used (bear or bare)
