

Georges Bank haddock catch by herring vessels using mid-water trawl gear

Report run on : May 8, 2015
 Data reported through: May 6, 2015
 Quota period: 5/1/14 to 4/30/15

Month	Monthly estimated haddock catch (mt)	Cumulative estimated haddock catch (mt)	Cumulative percent of quota (162 mt)
MAY	12.70	12.70	7.84%
JUNE	21.68	34.38	21.22%
JULY	17.97	52.34	32.31%
AUGUST	16.59	68.93	42.55%
SEPTEMBER	21.59	90.53	55.88%
OCTOBER	0.00	90.53	55.88%
NOVEMBER	0.00	90.53	55.88%
DECEMBER	0.00	90.53	55.88%
JANUARY	20.41	110.93	68.48%
FEBRUARY	2.57	113.50	70.06%
MARCH	0.27	113.77	70.23%
APRIL	0.31	114.08	70.42%

NOTICE: The Georges Bank (GB) haddock incidental catch cap is monitored based on the Northeast multispecies fishing year (May 1-April 30).

If the GB haddock incidental catch cap is caught, any vessel issued a herring permit and using midwater trawl gear may not fish for, possess, or land more than 2,000 lb of herring in the Herring GB Haddock Accountability Measure Area.

Effective 10/23/2014: The GB haddock incidental catch cap was exceeded in fishing year 2013. As a result, the GB haddock incidental catch cap for 2014 was adjusted downward from 179 mt to 162 mt to account for the overage.

The method for estimating haddock catch by midwater trawl herring vessels matches the method used for estimating catch and discards in the multispecies fisheries. This method replaces estimated pounds with observed pounds where available.

The cumulative method uses catch from the entire year to estimate a haddock catch ratio for each herring stock area. The haddock bycatch ratio is calculated for a stock area by dividing observed haddock catch for the year by the observed kept-all (total amount of all species) for the year.

Haddock catch on unobserved trips is then estimated by multiplying the catch ratio by the kept all from all unobserved herring midwater trawl vessels fishing within that haddock stock area.

More information on this methodology can be found at [click here](#) and [click here](#)

NOAA FISHERIES

These data are the best available to NOAA's National Marine Fisheries Service (NMFS) when this report was compiled. Data for this report are supplied to NMFS from vessels via the Vessel Monitoring System (VMS), the Vessel Trip Report System (VTR), and the Northeast Fisheries Observer Program. Data may be preliminary. Discrepancies with previous reports are due to corrections made to the database.

Notice

The Gulf of Maine (GOM) haddock incidental catch cap is monitored based on the Northeast multispecies fishing year (May 1-April 30).

If the GOM haddock incidental catch cap is caught, any vessel issued a herring permit and using midwater trawl gear may not fish for, possess, or land more than 2,000 lb of herring in the Herring GOM Haddock Accountability Measure Area.
