<sup>1</sup>GOM haddock carryover was capped at 10% of the initial FY14 allocation. For all other stocks, carryover from FY14 was capped by the FY15 ABC.

<sup>2</sup>GB Cod and GB Haddock may be carried over, but will be added to GB Cod west and GB Haddock west ACEs in the following fishing year.

<sup>3</sup>GB Yellowtail Flounder and non-allocated stocks cannot be carried over.

<sup>4</sup>De minimis carryover is a small amount of carryover catch above a sector's current year allocation that would be exempt from the pound-for-pound payback if overage repayment accountability is triggered.

<sup>5</sup>The de minimis amount of carryover from FY15 to FY16 is 1% of the FY16 initial ACE not to exceed unused ACE carried over from FY15.

<sup>6</sup>The maximum amount of carryover from FY15 to FY16 is 10% of the FY15 initial ACE, except for some stocks whose maximum carryover was reduced to prevent potential catch from exceeding ABC in FY16.

<sup>7</sup>Maximum potential carryover and the amount of FY15 ACE available to carryover exclude state-operated permit banks, which cannot carry over ACE.

Any value for a non-allocated species may be due to landings of that stock; misreporting of species and/or stock area; and/or estimated landings (in lieu of missing reports) based on vessel histories.

These data are the best available to NOAA's National Marine Fisheries Service (NMFS). Data sources for this report include: (1) Vessels via VMS; (2) Vessels via vessel logbook reports; (3) Dealers via Dealer Electronic reporting. Values are in live weight and include estimates of missing dealer reports. Differences with previous reports are due to corrections made to the database.

<sup>1</sup>GOM haddock carryover was capped at 10% of the initial FY14 allocation. For all other stocks, carryover from FY14 was capped by the FY15 ABC.

<sup>2</sup>GB Cod and GB Haddock may be carried over, but will be added to GB Cod west and GB Haddock west ACEs in the following fishing year.

<sup>3</sup>GB Yellowtail Flounder and non-allocated stocks cannot be carried over.

<sup>4</sup>De minimis carryover is a small amount of carryover catch above a sector's current year allocation that would be exempt from the pound-for-pound payback if overage repayment accountability is triggered.

<sup>5</sup>The de minimis amount of carryover from FY15 to FY16 is 1% of the FY16 initial ACE not to exceed unused ACE carried over from FY15.

<sup>6</sup>The maximum amount of carryover from FY15 to FY16 is 10% of the FY15 initial ACE, except for some stocks whose maximum carryover was reduced to prevent potential catch from exceeding ABC in FY16.

<sup>7</sup>Maximum potential carryover and the amount of FY15 ACE available to carryover exclude state-operated permit banks, which cannot carry over ACE.

Any value for a non-allocated species may be due to landings of that stock; misreporting of species and/or stock area; and/or estimated landings (in lieu of missing reports) based on vessel histories.

These data are the best available to NOAA's National Marine Fisheries Service (NMFS). Data sources for this report include: (1) Vessels via VMS; (2) Vessels via vessel logbook reports; (3) Dealers via Dealer Electronic reporting. Values are in live weight and include estimates of missing dealer reports. Differences with previous reports are due to corrections made to the database.

<sup>1</sup>GOM haddock carryover was capped at 10% of the initial FY14 allocation. For all other stocks, carryover from FY14 was capped by the FY15 ABC.

<sup>2</sup>GB Cod and GB Haddock may be carried over, but will be added to GB Cod west and GB Haddock west ACEs in the following fishing year.

<sup>3</sup>GB Yellowtail Flounder and non-allocated stocks cannot be carried over.

<sup>4</sup>De minimis carryover is a small amount of carryover catch above a sector's current year allocation that would be exempt from the pound-for-pound payback if overage repayment accountability is triggered.

<sup>5</sup>The de minimis amount of carryover from FY15 to FY16 is 1% of the FY16 initial ACE not to exceed unused ACE carried over from FY15.

<sup>6</sup>The maximum amount of carryover from FY15 to FY16 is 10% of the FY15 initial ACE, except for some stocks whose maximum carryover was reduced to prevent potential catch from exceeding ABC in FY16.

<sup>7</sup>Maximum potential carryover and the amount of FY15 ACE available to carryover exclude state-operated permit banks, which cannot carry over ACE.

Any value for a non-allocated species may be due to landings of that stock; misreporting of species and/or stock area; and/or estimated landings (in lieu of missing reports) based on vessel histories.

These data are the best available to NOAA's National Marine Fisheries Service (NMFS). Data sources for this report include: (1) Vessels via VMS; (2) Vessels via vessel logbook reports; (3) Dealers via Dealer Electronic reporting. Values are in live weight and include estimates of missing dealer reports. Differences with previous reports are due to corrections made to the database.

<sup>1</sup>GOM haddock carryover was capped at 10% of the initial FY14 allocation. For all other stocks, carryover from FY14 was capped by the FY15 ABC.

<sup>2</sup>GB Cod and GB Haddock may be carried over, but will be added to GB Cod west and GB Haddock west ACEs in the following fishing year.

<sup>3</sup>GB Yellowtail Flounder and non-allocated stocks cannot be carried over.

<sup>4</sup>De minimis carryover is a small amount of carryover catch above a sector's current year allocation that would be exempt from the pound-for-pound payback if overage repayment accountability is triggered.

<sup>5</sup>The de minimis amount of carryover from FY15 to FY16 is 1% of the FY16 initial ACE not to exceed unused ACE carried over from FY15.

<sup>6</sup>The maximum amount of carryover from FY15 to FY16 is 10% of the FY15 initial ACE, except for some stocks whose maximum carryover was reduced to prevent potential catch from exceeding ABC in FY16.

<sup>7</sup>Maximum potential carryover and the amount of FY15 ACE available to carryover exclude state-operated permit banks, which cannot carry over ACE.

Any value for a non-allocated species may be due to landings of that stock; misreporting of species and/or stock area; and/or estimated landings (in lieu of missing reports) based on vessel histories.

These data are the best available to NOAA's National Marine Fisheries Service (NMFS). Data sources for this report include: (1) Vessels via VMS; (2) Vessels via vessel logbook reports; (3) Dealers via Dealer Electronic reporting. Values are in live weight and include estimates of missing dealer reports. Differences with previous reports are due to corrections made to the database.

<sup>1</sup>GOM haddock carryover was capped at 10% of the initial FY14 allocation. For all other stocks, carryover from FY14 was capped by the FY15 ABC.

<sup>2</sup>GB Cod and GB Haddock may be carried over, but will be added to GB Cod west and GB Haddock west ACEs in the following fishing year.

<sup>3</sup>GB Yellowtail Flounder and non-allocated stocks cannot be carried over.

<sup>4</sup>De minimis carryover is a small amount of carryover catch above a sector's current year allocation that would be exempt from the pound-for-pound payback if overage repayment accountability is triggered.

<sup>5</sup>The de minimis amount of carryover from FY15 to FY16 is 1% of the FY16 initial ACE not to exceed unused ACE carried over from FY15.

<sup>6</sup>The maximum amount of carryover from FY15 to FY16 is 10% of the FY15 initial ACE, except for some stocks whose maximum carryover was reduced to prevent potential catch from exceeding ABC in FY16.

<sup>7</sup>Maximum potential carryover and the amount of FY15 ACE available to carryover exclude state-operated permit banks, which cannot carry over ACE.

Any value for a non-allocated species may be due to landings of that stock; misreporting of species and/or stock area; and/or estimated landings (in lieu of missing reports) based on vessel histories.

These data are the best available to NOAA's National Marine Fisheries Service (NMFS). Data sources for this report include: (1) Vessels via VMS; (2) Vessels via vessel logbook reports; (3) Dealers via Dealer Electronic reporting. Values are in live weight and include estimates of missing dealer reports. Differences with previous reports are due to corrections made to the database.

<sup>1</sup>GOM haddock carryover was capped at 10% of the initial FY14 allocation. For all other stocks, carryover from FY14 was capped by the FY15 ABC.

<sup>2</sup>GB Cod and GB Haddock may be carried over, but will be added to GB Cod west and GB Haddock west ACEs in the following fishing year.

<sup>3</sup>GB Yellowtail Flounder and non-allocated stocks cannot be carried over.

<sup>4</sup>De minimis carryover is a small amount of carryover catch above a sector's current year allocation that would be exempt from the pound-for-pound payback if overage repayment accountability is triggered.

<sup>5</sup>The de minimis amount of carryover from FY15 to FY16 is 1% of the FY16 initial ACE not to exceed unused ACE carried over from FY15.

<sup>6</sup>The maximum amount of carryover from FY15 to FY16 is 10% of the FY15 initial ACE, except for some stocks whose maximum carryover was reduced to prevent potential catch from exceeding ABC in FY16.

<sup>7</sup>Maximum potential carryover and the amount of FY15 ACE available to carryover exclude state-operated permit banks, which cannot carry over ACE.

Any value for a non-allocated species may be due to landings of that stock; misreporting of species and/or stock area; and/or estimated landings (in lieu of missing reports) based on vessel histories.

These data are the best available to NOAA's National Marine Fisheries Service (NMFS). Data sources for this report include: (1) Vessels via VMS; (2) Vessels via vessel logbook reports; (3) Dealers via Dealer Electronic reporting. Values are in live weight and include estimates of missing dealer reports. Differences with previous reports are due to corrections made to the database.

<sup>1</sup>GOM haddock carryover was capped at 10% of the initial FY14 allocation. For all other stocks, carryover from FY14 was capped by the FY15 ABC.

<sup>2</sup>GB Cod and GB Haddock may be carried over, but will be added to GB Cod west and GB Haddock west ACEs in the following fishing year.

<sup>3</sup>GB Yellowtail Flounder and non-allocated stocks cannot be carried over.

<sup>4</sup>De minimis carryover is a small amount of carryover catch above a sector's current year allocation that would be exempt from the pound-for-pound payback if overage repayment accountability is triggered.

<sup>5</sup>The de minimis amount of carryover from FY15 to FY16 is 1% of the FY16 initial ACE not to exceed unused ACE carried over from FY15.

<sup>6</sup>The maximum amount of carryover from FY15 to FY16 is 10% of the FY15 initial ACE, except for some stocks whose maximum carryover was reduced to prevent potential catch from exceeding ABC in FY16.

<sup>7</sup>Maximum potential carryover and the amount of FY15 ACE available to carryover exclude state-operated permit banks, which cannot carry over ACE.

Any value for a non-allocated species may be due to landings of that stock; misreporting of species and/or stock area; and/or estimated landings (in lieu of missing reports) based on vessel histories.

These data are the best available to NOAA's National Marine Fisheries Service (NMFS). Data sources for this report include: (1) Vessels via VMS; (2) Vessels via vessel logbook reports; (3) Dealers via Dealer Electronic reporting. Values are in live weight and include estimates of missing dealer reports. Differences with previous reports are due to corrections made to the database.
