¹GOM cod, GB haddock and GOM haddock carryover were capped at 10% of the initial FY15 allocation. For all other stocks, carryover from FY15 was capped by the FY16 ABC.

²GB Cod and GB Haddock may be carried over, but will be added to GB Cod west and GB Haddock west ACEs in the following fishing year.

³GB Yellowtail Flounder and non-allocated stocks cannot be carried over.

⁴De minimis carryover is a small amount of carryover catch above a sector's current year allocation that would be exempt from the pound-for-pound payback if overage repayment accountability is triggered.

⁶The de minimis amount of carryover from FY16 to FY17 is 1% of the FY17 initial ACE not to exceed unused ACE carried over from FY16.

⁷The maximum amount of carryover from FY16 to FY17 is 10% of the FY16 initial ACE, except for some stocks whose maximum carryover was reduced to prevent potential catch from exceeding ABC in FY17.

Maximum potential carryover and the amount of FY16 ACE available to carryover exclude state-operated permit banks, which cannot carry over ACE.

Any value for a non-allocated species may be due to landings of that stock; misreporting of species and/or stock area; and/or estimated landings (in lieu of missing reports) based on vessel histories.

These data are the best available to NOAA's National Marine Fisheries Service (NMFS). Data sources for this report include: (1) Vessels via VMS; (2) Vessels via vessel logbook reports; (3) Dealers via Dealer Electronic reporting. Values are in live weight and include estimates of missing dealer reports. Differences with previous reports are due to corrections made to the database.

¹GOM cod, GB haddock and GOM haddock carryover were capped at 10% of the initial FY15 allocation. For all other stocks, carryover from FY15 was capped by the FY16 ABC.

²GB Cod and GB Haddock may be carried over, but will be added to GB Cod west and GB Haddock west ACEs in the following fishing year.

³GB Yellowtail Flounder and non-allocated stocks cannot be carried over.

⁴De minimis carryover is a small amount of carryover catch above a sector's current year allocation that would be exempt from the pound-for-pound payback if overage repayment accountability is triggered.

⁶The de minimis amount of carryover from FY16 to FY17 is 1% of the FY17 initial ACE not to exceed unused ACE carried over from FY16.

⁷The maximum amount of carryover from FY16 to FY17 is 10% of the FY16 initial ACE, except for some stocks whose maximum carryover was reduced to prevent potential catch from exceeding ABC in FY17.

Maximum potential carryover and the amount of FY16 ACE available to carryover exclude state-operated permit banks, which cannot carry over ACE.

Any value for a non-allocated species may be due to landings of that stock; misreporting of species and/or stock area; and/or estimated landings (in lieu of missing reports) based on vessel histories.

These data are the best available to NOAA's National Marine Fisheries Service (NMFS). Data sources for this report include: (1) Vessels via VMS; (2) Vessels via vessel logbook reports; (3) Dealers via Dealer Electronic reporting. Values are in live weight and include estimates of missing dealer reports. Differences with previous reports are due to corrections made to the database.

¹GOM cod, GB haddock and GOM haddock carryover were capped at 10% of the initial FY15 allocation. For all other stocks, carryover from FY15 was capped by the FY16 ABC.

²GB Cod and GB Haddock may be carried over, but will be added to GB Cod west and GB Haddock west ACEs in the following fishing year.

³GB Yellowtail Flounder and non-allocated stocks cannot be carried over.

⁴De minimis carryover is a small amount of carryover catch above a sector's current year allocation that would be exempt from the pound-for-pound payback if overage repayment accountability is triggered.

⁶The de minimis amount of carryover from FY16 to FY17 is 1% of the FY17 initial ACE not to exceed unused ACE carried over from FY16.

⁷The maximum amount of carryover from FY16 to FY17 is 10% of the FY16 initial ACE, except for some stocks whose maximum carryover was reduced to prevent potential catch from exceeding ABC in FY17.

Maximum potential carryover and the amount of FY16 ACE available to carryover exclude state-operated permit banks, which cannot carry over ACE.

Any value for a non-allocated species may be due to landings of that stock; misreporting of species and/or stock area; and/or estimated landings (in lieu of missing reports) based on vessel histories.

These data are the best available to NOAA's National Marine Fisheries Service (NMFS). Data sources for this report include: (1) Vessels via VMS; (2) Vessels via vessel logbook reports; (3) Dealers via Dealer Electronic reporting. Values are in live weight and include estimates of missing dealer reports. Differences with previous reports are due to corrections made to the database.

¹GOM cod, GB haddock and GOM haddock carryover were capped at 10% of the initial FY15 allocation. For all other stocks, carryover from FY15 was capped by the FY16 ABC.

²GB Cod and GB Haddock may be carried over, but will be added to GB Cod west and GB Haddock west ACEs in the following fishing year.

³GB Yellowtail Flounder and non-allocated stocks cannot be carried over.

⁴*De minimis* carryover is a small amount of carryover catch above a sector's current year allocation that would be exempt from the pound-for-pound payback if overage repayment accountability is triggered.

⁶The *de minimis* amount of carryover from FY16 to FY17 is 1% of the FY17 initial ACE not to exceed unused ACE carried over from FY16.

⁷The maximum amount of carryover from FY16 to FY17 is 10% of the FY16 initial ACE, except for some stocks whose maximum carryover was reduced to prevent potential catch from exceeding ABC in FY17.

Maximum potential carryover and the amount of FY16 ACE available to carryover exclude state-operated permit banks, which cannot carry over ACE.

Any value for a non-allocated species may be due to landings of that stock; misreporting of species and/or stock area; and/or estimated landings (in lieu of missing reports) based on vessel histories.

These data are the best available to NOAA's National Marine Fisheries Service (NMFS). Data sources for this report include: (1) Vessels via VMS; (2) Vessels via vessel logbook reports; (3) Dealers via Dealer Electronic reporting. Values are in live weight and include estimates of missing dealer reports. Differences with previous reports are due to corrections made to the database.

¹GOM cod, GB haddock and GOM haddock carryover were capped at 10% of the initial FY15 allocation. For all other stocks, carryover from FY15 was capped by the FY16 ABC.

²GB Cod and GB Haddock may be carried over, but will be added to GB Cod west and GB Haddock west ACEs in the following fishing year.

³GB Yellowtail Flounder and non-allocated stocks cannot be carried over.

⁴De minimis carryover is a small amount of carryover catch above a sector's current year allocation that would be exempt from the pound-for-pound payback if overage repayment accountability is triggered.

⁶The de minimis amount of carryover from FY16 to FY17 is 1% of the FY17 initial ACE not to exceed unused ACE carried over from FY16.

⁷The maximum amount of carryover from FY16 to FY17 is 10% of the FY16 initial ACE, except for some stocks whose maximum carryover was reduced to prevent potential catch from exceeding ABC in FY17.

Maximum potential carryover and the amount of FY16 ACE available to carryover exclude state-operated permit banks, which cannot carry over ACE.

Any value for a non-allocated species may be due to landings of that stock; misreporting of species and/or stock area; and/or estimated landings (in lieu of missing reports) based on vessel histories.

These data are the best available to NOAA's National Marine Fisheries Service (NMFS). Data sources for this report include: (1) Vessels via VMS; (2) Vessels via vessel logbook reports; (3) Dealers via Dealer Electronic reporting. Values are in live weight and include estimates of missing dealer reports. Differences with previous reports are due to corrections made to the database.

¹GOM cod, GB haddock and GOM haddock carryover were capped at 10% of the initial FY15 allocation. For all other stocks, carryover from FY15 was capped by the FY16 ABC.

²GB Cod and GB Haddock may be carried over, but will be added to GB Cod west and GB Haddock west ACEs in the following fishing year.

³GB Yellowtail Flounder and non-allocated stocks cannot be carried over.

⁴De minimis carryover is a small amount of carryover catch above a sector's current year allocation that would be exempt from the pound-for-pound payback if overage repayment accountability is triggered.

⁶The de minimis amount of carryover from FY16 to FY17 is 1% of the FY17 initial ACE not to exceed unused ACE carried over from FY16.

⁷The maximum amount of carryover from FY16 to FY17 is 10% of the FY16 initial ACE, except for some stocks whose maximum carryover was reduced to prevent potential catch from exceeding ABC in FY17.

Maximum potential carryover and the amount of FY16 ACE available to carryover exclude state-operated permit banks, which cannot carry over ACE.

Any value for a non-allocated species may be due to landings of that stock; misreporting of species and/or stock area; and/or estimated landings (in lieu of missing reports) based on vessel histories.

These data are the best available to NOAA's National Marine Fisheries Service (NMFS). Data sources for this report include: (1) Vessels via VMS; (2) Vessels via vessel logbook reports; (3) Dealers via Dealer Electronic reporting. Values are in live weight and include estimates of missing dealer reports. Differences with previous reports are due to corrections made to the database.

¹GOM cod, GB haddock and GOM haddock carryover were capped at 10% of the initial FY15 allocation. For all other stocks, carryover from FY15 was capped by the FY16 ABC.

²GB Cod and GB Haddock may be carried over, but will be added to GB Cod west and GB Haddock west ACEs in the following fishing year.

³GB Yellowtail Flounder and non-allocated stocks cannot be carried over.

⁴De minimis carryover is a small amount of carryover catch above a sector's current year allocation that would be exempt from the pound-for-pound payback if overage repayment accountability is triggered.

⁶The de minimis amount of carryover from FY16 to FY17 is 1% of the FY17 initial ACE not to exceed unused ACE carried over from FY16.

⁷The maximum amount of carryover from FY16 to FY17 is 10% of the FY16 initial ACE, except for some stocks whose maximum carryover was reduced to prevent potential catch from exceeding ABC in FY17.

Maximum potential carryover and the amount of FY16 ACE available to carryover exclude state-operated permit banks, which cannot carry over ACE.

Any value for a non-allocated species may be due to landings of that stock; misreporting of species and/or stock area; and/or estimated landings (in lieu of missing reports) based on vessel histories.

These data are the best available to NOAA's National Marine Fisheries Service (NMFS). Data sources for this report include: (1) Vessels via VMS; (2) Vessels via vessel logbook reports; (3) Dealers via Dealer Electronic reporting. Values are in live weight and include estimates of missing dealer reports. Differences with previous reports are due to corrections made to the database.

¹GOM cod, GB haddock and GOM haddock carryover were capped at 10% of the initial FY15 allocation. For all other stocks, carryover from FY15 was capped by the FY16 ABC.

²GB Cod and GB Haddock may be carried over, but will be added to GB Cod west and GB Haddock west ACEs in the following fishing year.

³GB Yellowtail Flounder and non-allocated stocks cannot be carried over.

⁴*De minimis* carryover is a small amount of carryover catch above a sector's current year allocation that would be exempt from the pound-for-pound payback if overage repayment accountability is triggered.

⁶The *de minimis* amount of carryover from FY16 to FY17 is 1% of the FY17 initial ACE not to exceed unused ACE carried over from FY16.

⁷The maximum amount of carryover from FY16 to FY17 is 10% of the FY16 initial ACE, except for some stocks whose maximum carryover was reduced to prevent potential catch from exceeding ABC in FY17.

⁸Maximum potential carryover and the amount of FY16 ACE available to carryover exclude state-operated permit banks, which cannot carry over ACE.

The calculations for columns J, K, O, P, and Q involve data of all sectors combined and will not exactly match the calculations on a sector-by-sector basis because state-operated permit banks cannot carry over ACE and due to rounding/truncating of fractional pounds.

Any value for a non-allocated species may be due to landings of that stock; misreporting of species and/or stock area; and/or estimated landings (in lieu of missing reports) based on vessel histories.

These data are the best available to NOAA's National Marine Fisheries Service (NMFS). Data sources for this report include: (1) Vessels via VMS; (2) Vessels via vessel logbook reports; (3) Dealers via Dealer Electronic reporting. Values are in live weight and include estimates of missing dealer reports. Differences with previous reports are due to corrections made to the database.

Table 28: Common Pool FY 2016 End of Year Accounting of NE Multispecies Catch (lbs)

	ACE					Comparison of Catch and Total ACE to Determine Carryover										
Stock	FY16 Initial ACE	FY15 Carry- over ^{1,2,3}	FY16 Net Leases In and Conversions To	Total ACE	Catch	Total ACE - Catch	Percent Total ACE caught	FY16 Carryover ^{2,3,4,5,6}								
								de minimis Carryover				Maximum Carryover				
								FY17 Intial ACE	FY17 Initial ACE - Payback	lbs	mt	Maximum Potential Carryover (10% Cap) ⁷	FY16 ACE available to be carried over	Percent Carryover Reduction to Remain below ABC	lbs	mt
